

Stroke Rehabilitation Assessment Tool

Assessments completed by Specialized Stroke Team as part of Clinical Practice:

- Stroke Severity - NIHSS
- Functional Assessment - Alpha FIM[®]
- Cognitive Status - MoCa
- Screening for Communication Deficits
- Assessment of Medical Co-morbidities
- Assessment of Family Support
- Assessment of Pre-Existing Living Environment

Based on the Assessment of the Functional Measures the patient is triaged to the appropriate Recovery Stream to meet their needs:

- Band 2 - High Tolerance - Short Duration Recovery
- Band 3 - Moderate Tolerance - Moderate Duration Recovery
- Band 4 - Low Tolerance - Long Duration Recovery

There are no application to rehabilitation, the results of the functional assessments guide the streaming of patients and for Band 2 and 4 patients, the patient is transferred on Day 5 and for Band 4 - the patients is transferred within 21 days.
